

# Lecture 1, 6 August 2024

Madhavan Mukund

<https://www.cmi.ac.in/~madhavan>

Programming and Data Structures with Python

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**
- **Example:** Prepare a classroom for a seminar by a guest speaker
  - Things to do: arrange chairs, check projector, check audio/video, turn on a/c early, ...
  - Need to instruct support staff to do this task

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**
- **Example:** Prepare a classroom for a seminar by a guest speaker
  - Things to do: arrange chairs, check projector, check audio/video, turn on a/c early, ...
  - Need to instruct support staff to do this task
- Nature of instructions varies according to who is doing the job

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**
- **Example:** Prepare a classroom for a seminar by a guest speaker
  - Things to do: arrange chairs, check projector, check audio/video, turn on a/c early, ...
  - Need to instruct support staff to do this task
- Nature of instructions varies according to who is doing the job
  - Outsource: Just provide the time of the talk and the expected audience size.

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**
- **Example:** Prepare a classroom for a seminar by a guest speaker
  - Things to do: arrange chairs, check projector, check audio/video, turn on a/c early, ...
  - Need to instruct support staff to do this task
- Nature of instructions varies according to who is doing the job
  - Outsource: Just provide the time of the talk and the expected audience size.
  - Experienced staff: High-level checklist, need not describe each step explicitly

# What is programming?

- Writing systematic procedures in precise notation
  - Systematic procedure: **algorithm**
  - Precise notation: **programming language**
- **Example:** Prepare a classroom for a seminar by a guest speaker
  - Things to do: arrange chairs, check projector, check audio/video, turn on a/c early, ...
  - Need to instruct support staff to do this task
- Nature of instructions varies according to who is doing the job
  - Outsource: Just provide the time of the talk and the expected audience size.
  - Experienced staff: High-level checklist, need not describe each step explicitly
  - Inexperienced staff: Each step needs detailed instructions
    - Arranging chairs: arrange  $m$  rows of chairs,  $k$  chairs per row, leave aisles in between to walk to the back, ...

# Programming for data science — IPL 2024

City	Home team	Away team	Toss win	Match win	Run target
Chennai	RCB	CSK	RCB	CSK	174
Mohali	DC	PK	PK	PK	175
Kolkata	KKR	SRH	SRH	KKR	209

## Questions

- How many matches were played?
- What was the maximum run target?
- What was the average run target?
- How many matches had above average run targets?
- How many cities were venues?
- Which team played home matches at maximum number of venues?
- Is winning the toss an advantage?

*Is home ground an advantage?*

# Typical questions

- How many matches were played?

City	Home team	Away team	Toss winner	Match winner	Run target
Chennai	RCB	CSK	RCB	CSK	174
Mohali	DC	PK	PK	PK	175
Kolkata	KKR	SRH	SRH	KKR	209

- What was the maximum run target?
  - Again iterate through the rows
  - Maintain a variable `max` — the maximum `target` we have seen so far
    - Initialize to `0` — lower bound, no `target` is negative
    - Can also initialize `max` to `target` in first row — maximum is not meaningful for an empty table

# Summary

- Programming involves computing with information different types
- Variables hold intermediate values — data types
- Collections of values — lists, tuples, dictionaries
- Processing collections — iteration, conditional termination, filtering
